

🌐 AAA Business Consultancy – CRM Operating Workflow & Architecture
A professional guide for the client outlining lead ingestion, social media integration, AI automation, role permissions, and the complete step-by-step conversion workflow.

🗺️ 1. Master System Architecture & Flow

This diagram illustrates the journey of a prospect from their first interaction (Social Ads, Organic Social, or Manual entry) up to final visa processing and approval:

M -->|Regex Document Category Sync| N(Compliance Verification by Operator)

N -->|Approved| O(Visa File Submitted to Embassy)

%% Commissions Payout

I -->|Calculated Payout| P(10% Agent Commission Payout Audit)

🍷 2. Lead Ingestion: How Do Leads Enter the CRM?

Leads enter the CRM database through three primary channels:

A. Paid Social Media Campaigns (Ads)

When you run paid advertisements on social media platforms (Facebook, Instagram, TikTok, Snapchat, Google Ads):

1. ***Click-to-Chat Ads:*** A prospect clicks the "Send Message" button on your ad. The platform redirects them instantly to WhatsApp or Messenger. The CRM's integrated webhook receives this event and triggers the AI Chatbot.
2. ***Lead Form Ads:*** The prospect fills out a lead form on the social media platform. The lead details are pushed instantly into the CRM Registry via API integrations.

B. Organic Social Media Channels

Social media is not just for ads; it serves as a customer communications hub. The CRM contains a ***Social Inbox*** supporting:

- *Direct Messages (DMs) & Comments:*** WhatsApp, Facebook Messenger, Instagram DMs, Telegram, LinkedIn, Twitter/X, Pinterest, WeChat, LINE, Viber, Discord, and Snapchat.
- *How it works:*** When someone comments on your posts or sends a DM, it lands in the ***Social Inbox***. Agents can reply directly from the CRM without opening different apps.

C. Manual Additions

If a lead contacts you offline, you can add them manually:

- *QR Codes & Offline Events:*** Scanning QR cards at offline events triggers an entry.
- *Walk-ins / Phone Calls:*** Admins, Operators, or Agents can click ***"Add Lead"** on the leads page and manually input name, email, phone, and target visa.

🤖 3. The Role of the AI Chatbot & Automation

The AI chatbot acts as your first-line qualifier and booking assistant. It saves hours of manual follow-ups:

1. ***Pre-Qualification Dialogues:*** When a lead messages on WhatsApp or Messenger, the AI chatbot asks standard screening questions:
 - *What is your monthly passive income?**
 - *How many dependents are relocating with you?**
 - *Which language do you prefer to consult in?**
2. ***Eligibility Algorithm:*** The AI checks if their profile matches the Spain Visa requirements (like Spain Digital Nomad Visa minimum income thresholds).
3. ***Automated Slot Booking:***
 - *If *Qualified*, the AI sends a booking link.**
 - *The client selects a slot. The CRM books the appointment and generates a Zoom/Google Meet link.**
 - *Portal Credentials:*** The CRM automatically creates an account for the lead on the Client Portal and emails them their temporary ID and Password.

👤 4. User Roles & Permission matrix

The CRM enforces a strict separation of duties across *6 specialized dashboards* to protect sensitive data:

Role	Core Purpose	Menu Permissions	Key Restrictions
Super Admin	Full Business Oversight & Setup	All Menus (Leads, Clients, Finance, Agents, Settings, S3, Audits)	None (Absolute Access)
Admin	Daily Operations & Team Management	Dashboard, Leads, Clients, Calendar, Agents, Reports, Integrations	Restricted from payment gateway keys and database resets.
Agent (Consultant)	Client Consultation & Conversions	Social Inbox, Assigned Leads, Calendar, Clients, Personal Performance	Only sees assigned cases. Cannot change password self-sufficiently.
Operator (Operations)	Case Processing & Document Verification	Dashboard, Active Cases, Doc Verification, Closed Cases, Social Inbox	Cannot view client payments, financial totals, or billing keys.
Finance Manager	Payments, Invoices, Refunds & Audits	Finance (Payments/Invoices), Refunds & Commissions, Settings (Gateways)	Cannot read client visa documents or chat logs.
Marketing Manager	Ads Performance & ROI Analysis	Dashboard, Marketing Reports, Leads Analytics	Cannot view client chats, financial details, or personal files.

⚙️ 5. Step-by-Step Operating Workflow (Lead to Client)

Step 1: Lead Registration

A prospect enters the CRM (via Social Ads, DM, or Manual addition). Their status is marked as **"New Lead"**.

Step 2: Agent Assignment

***Auto-Routing:** The CRM matches the lead's preferred language and nationality with a suitable Agent. If multiple agents match, it routes to the one with the lowest active workload.

***Manual Assignment:** Admin or Operations Manager manually overrides and assigns the lead.

***Self-Claim:** Agents can view the unassigned calendar events list and click **"Claim Consultation"** to pick it up.

Step 3: Meeting Acceptance & Recording

***The assigned Agent receives a notification. They accept the slot.**

***Fallback Trigger:** If the Agent fails to accept the slot within a specified time limit, the CRM automatically redirects the lead to the next available Agent.

***Recorded Call:** The Agent conducts the consultation on Zoom/Meet. The meeting is automatically recorded and synced to your AWS S3 Cloud Storage.

Step 4: Invoice Generation & Discount Calculations

If the consultation is successful, the Agent (or Finance Manager) creates an invoice:

- * *Schengen Visa Exception:* If the service is "Schengen Tourist Visa", it bypasses standard relocation packages and creates a flat *€400* invoice.

- * *Other Visa Pathways:* The system applies itemized calculations:

 - * Base Package Fee + Main Applicant Fee + Dependent Fee (€250 per dependent) - Custom Discounts + VAT (5%).

- * *Refund Disclaimer:* The invoice prints a warning label highlighting: "50% Non-refundable in case of visa rejection".

Step 5: Payment Processing & Conversion

- * The client receives the invoice and pays via *Stripe* (Credit/Debit Card), *Tamara/Tabby* (Installment plans), or *Bank Transfer*.

- * Once payment is cleared, the system converts the lead into a *"Client", assigning a unique Client ID (e.g., CL2002), and setting their status to *"Under Process (Document Preparation)"**.

Step 6: Document Verification (Operations & Compliance)

- * The client uploads files onto the Client Portal.

- * *Regex File Matcher:* The portal reads the file names (e.g., passport_john.pdf) and auto-categorizes them (e.g., Passport, Bank Statement).

- * *Operator Review:* The Operator reviews the uploaded documents on their Doc Verification board.

 - * If correct: Marks as *Approved*.

 - * If incorrect/missing: Highlights them in Red warning boxes and contacts the client directly via the *Social Inbox* (WhatsApp/FB/Telegram) to request re-uploads.

- * Once all documents are approved, the Operator compiles the final visa file and submits it to the embassy.

Step 7: Case Closure & Commission Payouts

- * Once the embassy responds, the case is updated: *Visa Approved, **Visa Rejected, or **Client Withdrawn*.

- * *Automatic 50% Refund:* If the visa is rejected, the Finance board calculates the automatic 50% refund.

- * *Agent Payouts:* The CRM automatically calculates the Agent's 10% commission on the closed payment and highlights it on the Agent's Profile Performance card.
